NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

consistence for possible spicates or association focol facilities in information.

To obtain more deficial information in areas where Base Flood Elevations ((FEE) and/or floodways have been determined, users are encouraged to consult her Flood Findles and Floodway Data and/or Summary of Silhurst Elevations tables contained within the Flood Insurance Study FEE) report that accomplied to the contrained and the flood Insurance Study FEE) report that compliance trailing purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood deviation data presented in the FEE report should be utilized in conjunction with the FIRM for purposes of contraction and for doctoration and sold conformation and sold conformation and for doctoration and sold conformation and for doctoration and sold conformation and

Constal Base Flood Elevations shown on this map apply only landward of O/ North American Vertical Datum of 1988 (NAVD 88). Users of this FRMI should be aware that costal flood elevations are also provided in the Summary of Stillware Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillware Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillware Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on the FRMI.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for his jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this

The projection used in the progenition of this may were Universal Transverse Memorator (TDM) zero 15th. The interioration datum was IAD 33, GR830 Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent principlions may result in sightly positional differences in map reasures across jurisdiction boundaries. These differences do not affect the accuracy of the FRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1920 and the North American Vertical Datum of 1939, self the National Geodetic Survey website at http://www.nps.npa.npg.gov or contact the National Geodetic Survey website of http://www.nps.npa.npg.gov or contact the National Geodetic Survey with eligibility and detes:

NGS Information Services NOAA, NNGS12 National Geodetic Survey SSMC-3, #9202 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242

To obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from U.S. Geological Survey Digital Orthophoto Quadrangles produced at a scale of 1:12,000 from photography dated 1992 or later.

This map reflects more detailed and up-to-date stream channel configurations than those shown on the previous FIRM for this juridiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the FFDed Profiles and Floodway Data basis in the FFDed Insurance Oblight Report (which contains authoritative hydraulic date) may reflect stream channel distances that differ from what is shown on his map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels; community map repostory addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is bottom.

Contact the FEMA Map Service Center at 1-800-358-9616 for information on available products associated with his FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report and/or digital versions of this map. The FEMA Map Service Center may also received by Fax at 1-800-358-962 and its verbale at http://www.hema.gov/inisc.

If you have questions about this map or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA MAP (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

LEGEND

ZONE X

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any glewn year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special flood Hazard Area is the Zones A, AE, AH, AO, RA, A99, V, and VE. The Base Flood Elevation is the water-surface developed the 1% semial chance floor.

ZONE A No Race Flood Elevations determined

ZONE AE Base Flood Elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Flevations determined.

Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations

Coastal flood zone with velocity hazard (wave action); no Base Flood Blackford determined

Coastal flood zone with velocity hazard (wave action); Base Flood Fluoritions determined

FLOODWAY AREAS IN ZONE AE

ZONE X Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are undetermined, but possible

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

PAs are normally located within or adjacent to Special Flood Hi

0.2% annual chance floodplain boundary

Zone D boundary

Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Rood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
